## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to an optical information recording medium, classified in class 369, subclass 275.1+.
  - II. Claims 12-17, drawn to a method of recording and reproducing, classified in class 369, subclass 111.
  - III. Claims 18-50, drawn to an optical system, a multi-wavelength light source, and an optical waveguide device, classified in class 369, subclass 112.27.
2. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the optical system, multi-wavelength light source, and optical waveguide device can be used with any optical information recording medium, rather than the claimed phase change material recording medium having a multi-recording layer. The subcombination has separate utility such as with an optical recording apparatus using a laser, beam splitters to guide light, and an objective lens.
3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In

Art Unit: 2652

the instant case, the method of recording and reproducing can be practiced with an optical information recording medium that has a first recording layer with a light transmittance less than 30% for a crystal or an amorphous state.

4. Inventions III and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the optical system, multi-wavelength light source, and optical waveguide device can be used with a method that does not require two laser beams having a wavelength relationship such that the absolute value of the difference between the wavelengths is between 10 and 120 nanometers.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
